AMSA

This year was, once again, marked by the COVID-19 pandemic, and it really proved the great need that we have to count on world-class doctors in order to overcome health crises. It also became clear that it is necessary to add efforts from people, foundations, companies and organizations of civil society, to support the Mexican Health Sector.

Since 2010, AMSA has been working to provide training for young Mexican physicians. We recognize all doctors who, during the pandemic, made a difference in their workplaces by providing leadership, motivation and outstanding clinical skills.

We are aware that our health system requires support regarding facilities, clinical laboratories, health centers, as well as equipment and technologies in order to fulfill high quality services. However, the most important variable is the human factor. In AMSA we are convinced that investing in human capital is an essential step for Mexico's development, and to pursue a health and education system that benefits most of our population.

Our purpose is to offer these training opportunities to Mexican physicians, in the technical and professional fields, in order to promote high quality health services for the Mexican society.

In 12 years of continuous work, we have accomplished great achievements: 3,387 Mexican doctors have been directly trained, 700 of these Mexican doctors have attended OMI seminars in Salzburg, Austria we have offered 30 medical observerships in the United States and in Austria, 2,102 Mexican doctors who have attended OMI-MEX seminars, 553 who have attended OMI-MEX Webinars during the pandemic and also the scholarships that have been granted for the Leadership and Senior Management Program taught by the Panamerican University to doctors that have management positions in public and private hospitals, as well as scholarships for post graduate programs at Harvard University in partnership with the Harvard Foundation in Mexico.

Our collaboration with The Open Medical Institute has grown by creating OMI-MEX Seminars in Mexico, which allows us to have access to recognized doctors and specialists from some of the most important hospitals and universities in the United States and Europe; such as the Memorial Sloan Kettering, the Children's Hospital of Philadelphia, among others.

AMSA's mission could not have been possible without the support of our allies and members of the Board of Trustees. We work hand in hand with public and private institutions of the Mexican Health Sector, the National Institutes, the Mexican Institution for Social Security, and also the hospitals of the private sector such as the ABC Medical Center, Médica Sur Hospital, Academic Institutions such as UNAM, Tecnológico de Monterrey, the Panamerican University and Harvard University; foundations like Kardias, Carlos Slim Foundation, Alfredo Harp Helú Foundation and Ensamble Salud, among others. We all work united with the common goal of closing the gaps in the access to health services.

In AMSA we have come a long way and we are aware of what still needs to be done. We work with full dedication in order to fulfill our mission and vision; we focus on human capital to provide better quality of life and health for the Mexican society. Our purpose aligns with the doctors' advocacy to help others.

Open Medical Institute OMI

2022 marked an important year for the development of the OMI hub in Mexico.

The OMI MEX seminars are coordinated out of the OMI headquarters in Salzburg, Austria and organized locally by AMSA. The seminars in Mexico serve young, dynamic Mexican and Latin American physicians in all critical areas of medicine. In 2022, we were able to organize 11 three-day OMI MEX seminars based on the academic principles of the OMI, including state-of-the-art lectures, case presentations, and opportunities for informal discussion. The international OMI faculty covered topics important to the Mexican healthcare system in General Pediatrics, Medical Education, Pediatric Emergency Medicine, Global Health, Neonatology, Diabetes, Urology, Gynecologic Cancers, Family Medicine, Neurosurgery (Spine), and Maternal and Infant Health. The Global Health: Vector-Borne Diseases course led by faculty from the Institut Pasteur, Paris was the highlight of the year.

According to the course evaluations and personal communication, the seminars were a great success and met or surpassed fellows' expectations. To focus even more on Mexican health issues, AMSA fellows who participated in the OMI seminars in Salzburg, Austria complimented the faculty as advisers. In the future, each OMI MEX Seminar should include a Mexican faculty member and, eventually, a Mexican course co-director. The newly founded OMI MEX Medical Advisory Board, under the leadership of Dr. David Kershenobich, will guide us to the right choices.

The OMI MEX seminars would not have been so successful without the support provided by the AMSA staff, under the leadership of Becky Saenz. The careful selection of the venues, to create a perfect teaching environment was a significant factor in this success. All faculty members enjoyed their participation enormously and committed their future support.

On behalf of Stephanie Faschang, OMI managing director, I would also like to thank you for the smooth cooperation between the offices in Mexico and Salzburg, Austria. I am looking forward to a bright future collaboration between OMI and AMSA!

Wolfgang Aulitzky

Rebeca Aguilar-Álvarez de Sáenz
EXECUTIVE DIRECTOR
AMSA

After the tough years we went through during the COVID-19 pandemic and all the challenges we faced at a global level, 2022 was the year in which the world finally began to work again in a similar way as it did before. Industries came back into business, countries reopened their borders to world tourism, the economy resumed its growth and education, one of the most affected fields during the pandemic, also began to come back to its normal basis. Although teaching methods have evolved and the pandemic has made it clear that online teaching is here to stay, we must also recognize that it cannot fully replace the traditional teaching method and the benefits it brings along.

As of 2022 we have been able to return to our original teaching method, which is on-site seminars in Salzburg, Austria, in collaboration with the Open Medical Institute (OMI).

In AMSA we are convinced that the best way to promote development in Mexico is by investing in human capital through medical education.

In 2022 we provided medical training to 98 doctors in Salzburg, Austria, through OMI on-site seminars, including 2 Mexican physicians who attended Vienna's General Hospital to complete a medical observership with world-renowned professionals as their mentors. This adds a total of 700 Mexican physicians trained in Salzburg, Austria, since 2010.

Regarding OMI-MEX seminars in Mexico, this year we offered medical training to 290 doctors in on-site seminars and 130 more in online seminars. Since 2010, we have trained 2,687 doctors in 60 on-site seminars.

After 12 years of working in Mexico, we have many success stories of physicians who have led a professional career with excellence, others who have won a global recognition of some kind, doctors who have participated in international forums with the support of AMSA's allies, doctors who have received scholarships or grants to complete post graduate programs and also doctors that have been invited to participate in medical observerships in the most recognized universities of Europe.

AMSA's strength and constant growth lies in the strategic alliances that have been established over the years; as well as the constant cooperation with Mexico's most important public and private health institutions and the leaders who operate them.

A great example of the results of these academic alliances are the two academic institutions that have invited outstanding AMSA fellows to participate in their programs, granting them a scholarship recognizing their great performance and professional leadership. These two important academic programs are the Leadership and Senior Management Medical Program offered by the School of Medicine of the Panamerican University and the Safety, Quality, Informatics and Leadership Program from Harvard University Medical University.

Rebeca Aguilar-Álvarez de Sáenz and Wolfgang Aulitzky.

After 12 years of working in Mexico, we have many success stories of physicians who have led a professional career with excellence, others who have won a global recognition of some kind, doctors who have participated in international forums with the support of AMSA's allies, doctors who have received scholarships or grants to complete post graduate programs and also doctors that have been invited to participate in medical observerships in the most recognized universities of Europe.

In 2022, we extended the OMI program in Mexico by inviting Latin American doctors to participate. In July, OMI announced the official launch of OMI Vietnam, with which we now have a continuous medical education global program with 3 training centers: Salzburg, Austria, Mexico City and Hanoi in Vietnam.

During the year of AMSA's tenth anniversary in 2020, the AMSA Award was instituted to recognize members of the Mexican health sector that, with their initiatives and leadership, improve the quality of health services in Mexico. On September 27th, we hosted a very special ceremony to award the second edition of this important recognition to the Carlos Slim Foundation, for its great vision and commitment to Mexico in the construction of the COVID-19 Temporary Unit in Mexico City and for its collaboration with AstraZeneca Pharmaceutical in the manufacture of the COVID-19 vaccine that saved more than 150 million people in Latin America.

We know that we still may face many challenges ahead and more goals to be accomplished, but I am sure that with the leadership, commitment and enthusiasm of our Board of Trustees we can achieve great things as we have done so far.

We will continue working with great dedication and conviction to offer continuous medical education to Mexican physicians and therefore fulfill our mission to improve the quality of health services in Mexico.

A Commitment to HEALTH

Our Mission

To maximize the positive impact of health professionals in Mexico through continuing education, empowerment, and forging ties.

Our Vision

To be the most innovative foundation in Latin America by promoting human capital in the health ecosystem.

FOUR-STEP APPROACH TO DEVELOP CAPACITIES

AMSA operates in partnership with the Open Medical Institute (OMI) to encourage physicians to develop their skills in education, leadership, health quality and patient safety, applied clinical research and clinical information.

OMI OPEN MEDICAL INSTITUTE

- **Global medical education initiative**, founded in 1993 to improve healthcare and the physicians' skills.
- **OMI** shares knowledge and medical experience and promotes transnational medical partnerships.
- **Leading institutions** in Latin America, the United States and Europe provide academic leadership.
- **The Faculty members** offer their support 100% pro bono.

OMI Seminarios in SALZBURG, AUSTRIA

The physicians who participate in the OMI seminar in Salzburg, Austria are selected based on their merits and leadership. They must be Mexican citizens, younger than 40, fluent in English, and have social skills and a willingness to share their experience and knowledge in Mexico when they come back, this benefits vulnerable groups.

The professors, world-renowned physicians, donate their time and experience, during the seminars, forging close ties with the fellows that attend the seminars.

Since 2020, during the COVID-19 pandemic, OMI implemented a new teaching technology to offer online seminars to selected fellows around the world, known as OMInars. Today, we have finally returned to our original teaching scheme, and most seminars are offered on-site at Schloss Arenberg in Salzburg, Austria.

Oralia Alejandra Orozco Guillén

National Institute of Perinatology

OMI Seminar: Internal Medicine 2022

June 19th - 25th, 2022

"This seminar is a great opportunity for young doctors; the Open Medical institute is a great international forum that encourages the construction of leaders, facilitates the exchange of ideas in a global and multicultural manner in an academic environment where great commitment and high-level academic competition are always present. I return home with the great experience of having lived one of the best weeks of my life and the commitment of sharing everything I learned from the best faculty members with my colleagues in Mexico".

Eduardo Corona Rodarte

National Institute of Medical Sciences and Nutrition Salvador Zubirán

OMI Seminar: Dermatology 2022

October 16th - 22nd, 2022

"I must say that it is a life changing experience. The seminar is conformed of world class lectures with such a friendly atmosphere that allows it allows us, the fellows, to fully immerse in the academic content. Networking is beyond incredible. I am forever grateful to have been selected for this academic and personal experience. I return to Mexico with a lot more knowledge, friends, mentors, and motivation to provide high quality level healthcare in our country".

MEDICAL Observerships

All the fellows that participate in the OMI seminars in Salzburg, Austria are candidates for a one-to-three-month medical observership in Europe or the United States, at one of the many medical institutions that have a partnership with OMI. The selection process is based on the physicians' merits and commitment to AMSA back in Mexico.

The physicians directly benefit from:

- Exchange of experiences and professional practice
- Knowledge of new techniques and treatment protocols
- Access to modern hospitals
- Creation of joint research and collaborative study projects

Sonia López Flores, MD

Vienna General Hospital

Medical Observership in Anesthesiology

September 1st-30th, 2022

"The opportunity I had to have spent a month in the Vienna General Hospital was a great experience; it is a huge hospital, with a great diversity of patients. I can say that it was one of the best experiences I have ever had, I learned a lot. I was fortunate to share experiences and learn from world-renowned doctors, like Dr. Alessia Felli, who welcomed me since the first day and supervised my rotation the whole time. Something that I also really liked is that I made a great team with my colleagues who were also undergoing their medical observership. Without a doubt, my perspective on anesthesiology practice is different after this opportunity and I feel much more motivated to implement this knowledge in my work area on a daily basis.

Being an AMSA Fellow has opened important and unique doors for my professional career; I don't have enough words to thank everything this AMSA family has given me that makes me grow not only as a doctor, but also as a human being".

Wolfgang Aulitzky and Pablo Legorreta.

OMI-MEX and AMSA Seminars in MEXICO

OMI-MEX is a joint initiative between the Open Medical Institute and AMSA. Since the beginning of this academic collaboration in 2010, 700 Mexican physicians have participated in OMI programs in Salzburg and OMI faculty have trained more than 2,600 physicians in 60 seminars in different states of Mexico.

The goal is to have the OMI curriculum travel the globe, with the same expert faculty who teach OMI seminars in Salzburg, Austria, also lecturing in Mexico. The material presented in Mexico mirrors what was taught in Salzburg the year before. Throughout 2022, 11 OMI MEX seminars took place under the academic leadership of Weill Cornell Medicine, Memorial Sloan Kettering Cancer Center, the Children's Hospital of Philadelphia, Duke University, Columbia University, and the Institut Pasteur.

OMI-MEX Seminars are organized in collaboration with public and private health institutions, Mexican organizations and/or medical universities. The seminars are 2-3 days in length and have the participation of OMI faculty who travel to Mexico to donate their time and knowledge.

Following OMI's four-step approach, the initiative has been so effective in Mexico as it is in Central and Eastern Europe, Asia and Africa.

Diana Verónica Reyes García
ABC Medical Center

OMI Seminar: Pediatric Anesthesia
 and Critical Care
 January 16th - 22th, 2022

"My expectations have been exceeded; it is a truly enriching experience. The close relationship that is established with colleagues from other countries, as well as with experts in relevant topics in my medical practice, have helped me a lot to look at everything from a different perspective. All the fellows that attend, not only we pursue the same professional interests but we end up forming a special family that, up to this day, drives me to continue updating myself in the latest topics, growing and striving to be a better doctor every day".

Perla Ayumi Kawakami Campos
National Institute of Medical Sciences and Nutrition Salvador Zubirán

OMI Seminar: Ophthalmology
 November 13th - 19th, 2022

"I can honestly say the seminar surpassed my expectations in many ways. Starting by the academic relevance of the topics included in the program as well as the faculty members and their passion to teach. Also, the diversity of the fellows that attend, it truly sets the perfect space for valuable networking. I will forever be grateful to the professors, the Open Medical Institute and AMSA for allowing me to attend this seminar which not only will improve my quality as a physician but also has increased my passion for teaching".

José Luis Cervantes Gutiérrez
PREVITA Hospital

OMI Seminar: Gynecology and Obstetrics
 June 26th-July 2nd, 2022

"This international seminar, of great educational innovation, allowed me to update myself in a topic of great importance in our country, polycystic ovary syndrome, as well as to break boundaries in terms of what other countries are doing with reproductive medicine. Now I have a broader look from different disciplines and contexts that will serve as inspiration and motivation to be able to implement the essentials of gynecology, not only in the hospital, but also in the educational field; applying the latest research trends for an improvement in practice and education".

Jesús Sánchez Pacheco
National Institute of Cardiology

OMI Seminar: Cardiac Surgery
 October 30th-November 5th, 2022

"I can only mention how productive this seminar was, which provided me with the necessary tools to continue offering high quality care to my patients. All the knowledge acquired and the experience gained during this seminar have, by far, exceeded my expectations."

"I congratulate
 and thank AMSA and
 OMI for this great
 seminar that gave us
 the opportunity to open
 our minds towards
 new perspectives".

”

Mónica Cecilia Castillo Pérez
Dr. Manuel Gea González
General Hospital

OMI Seminar: Otology and Temporal
 Bone Surgery
 October 2nd - 8th, 2022

"I had the opportunity to attend the Otology and Temporal Bone Surgery seminar; I really enjoyed getting to meet people from so many countries and learning so many different managements that they apply in their medical practice and getting to be friends. The best part of the seminar was definitely temporal bone lab, all of the faculties were closely helping us solving questions and patiently letting us do all the steps. Truly it was the best experience, I learned a lot and I absolutely recommend for others to take this opportunity, it is totally worth it. Thanks for the opportunity, I am very grateful with AMSA and the OMI for letting me live this experience."

Gonzalo Gutiérrez Díaz
Mexican Institute
for Social Security (IMSS)

OMI Seminar: Cardiology
 July 3rd- 9th, 2022

"This has been one of the most extraordinary experiences I've had, in the professional, academic and cultural aspects. When I met the faculty members, I was able to confirm their enormous knowledge, experience and willingness to answer all our questions and doubts. The way they talked about their topics, how they transferred their experience and ideas to us, their availability to respond to the questions, everything was great and fantastic! The experience during the lectures was incredible, the quality of the conferences, the way the faculty talked to us, the content and the images, everything was outstanding, It is something I will remember all my life. All these experiences and activities will improve my abilities as a teacher with my residents at the hospital."

César Lam Chung

National Institute of Medical Sciences and Nutrition Salvador Zubirán

OMI Seminar: Lipid Metabolism
and Atherosclerosis
October 23rd - 29th, 2022

"I have gained a lot of knowledge by attending this OMI seminar. This is one of the most gratifying learning experiences of my career. Colleagues of different disciplines and countries who are passionate for knowledge continue to inspire me and their expertise has enriched me in a positive way. The interaction of the participants with the faculty members represents a unique experience. The program and the topics are very interesting and updated, which increases the level of our medical knowledge. I am proud and grateful for this unique opportunity."

Laila Zulema García Ulloa

Partners in Health Mexico

OMI Seminar:
Pediatric Palliative Care
November 6th - 12th, 2022

"Thanks to the seminar I have learned many new theoretical concepts, but also, and most importantly, how to apply them in my own professional context. It helped me realize that palliative care is not an end-of-life intervention, but an approach to care to improve the quality of life for patients and their families. I am very grateful for the opportunity to participate in the seminar that has made me grow professionally and personally as well."

Post Graduate

Panamerican University

Leadership and Senior Management Medical Program Panamerican University

This program, offered by the School of Medicine of the Panamerican University in collaboration with Alianza Médica para la Salud (AMSA), seeks to develop and strengthen (in doctors and other health professionals in the public and private sectors) leadership and senior management competencies focused on the quality of health care organizations.

By designing a strategy and an action plan during the program, the participants will achieve a high performance which directly benefits the patients and their families.

The program has distinctive features that make it unique and highly competitive:

- Primarily aimed at management teams, doctors and exceptionally to other health professionals who occupy management positions.
- Structured based on a solid conceptual framework that organizes the contents logically and directs them towards the realization of an executable project during the program.
- Focused on the leadership-management pairing and not on others concepts like administration or management.
- Focused on medical care and not on the understatement of "health care" or "health institutions".
- Focused on the concepts of quality and efficiency of the medical care proposed by the Institute of Medicine.
- Taught by professors of recognized national and international prestige, who have extensive experience in leadership and senior management.

Harvard Medical School Program SQIL: Safety, Quality, Informatics & Leadership

This year, five AMSA fellows participated and successfully completed the Post Graduate Program in Safety, Quality, Informatics and Leadership taught by Harvard Medical School. These fellows were selected based on their great performance and commitment to replicate knowledge in Mexico after their participation in OMI seminars in Salzburg, Austria.

This program is intended for physicians working in leadership roles in clinical quality and patient safety or for those looking to transition into such roles.

AMSA had the honor of participating in a "Matching Funds" scheme to sponsor these scholarships for our outstanding fellows. It fills us with satisfaction to be able to support our fellows to continue to participate in high quality training programs, that generate a direct impact in their professional careers.

Harvard Medical School Program

Testimonials of sponsored AMSA Fellows in the Harvard Medical School Program

"This program marked a before and after feeling in my person. Specially, in how I see things and the high-level approach to solving problems. Learned that a change is valuable even if it is small, and that if we unite people with a spirit of change, we can do great things.

Thank you, AMSA, for helping to promote a positive change in my medical performance. That will surely reflect on my patients".

Elisa Dorantes Acosta

Growth • Leadership •

"AMSA has been crucial in my professional career, a clear change and a unique support in my life. I have been fortunate to have the support of many people throughout my life, but never had I felt so sheltered, cared for and blessed like having the opportunity to participate in the AMSA programs. It was after my participation in the 2018 OMI Seminar on Developmental and Behavioral Pediatrics in Salzburg, Austria, that today we have a very strong relationship with the Children's Hospital of Philadelphia (CHOP).

It is thanks to AMSA and the strong relationship we have constructed with CHOP, specifically with the division of Developmental Pediatrics, that today we have online sessions to exchange management of patient experiences, significantly enriching our knowledge. AMSA has definitely opened an incredible network of connections in my professional career".

Antonio Rizzoli Córdoba

"The exceptional opportunity to study the SQIL 2022 Program from Harvard Medical School has given me the power to try to change those things in the healthcare system that, although we know don't work, don't change. It has given me the power to have a positive impact for my country from my work area, in the hospital where I work, for the community that I live in, for the university where I set an example for my students, among others. The tireless work of AMSA in Mexico, has given me the power to continue carrying out my vocation to serve and the power to convince others that the changes that we need can be achieved if we all work together".

Alexandro Martagón Rosado

Inspiration • Power • Change

"I would like to express my sincere gratitude towards AMSA for the impact it has had in my continuous training as leader and as a doctor. I have successfully completed the SQIL Program taught by the School of Medicine of Harvard University. This program, of high academic quality, has allowed me to reinforce my commitment to contribute to quality improvement in the Mexican healthcare system, especially in the area of dermato-oncology.

I acquired theoretical and practical knowledge, feedback and different visions and perspectives of professional faculty members and other international students".

Ana Lilia Ruelas Villavicencio

"For me, this program, represented an enormous growth in every sense of the word, starting by all the knowledge gained through all the topics covered in the program, a growth in my eager to learn more about certain topics as well. Also, an enormous growth in my personal life for being able to complete this program from such a prestigious university and to have had the opportunity to have shared so many experiences with colleagues, that I now call my friends, as well as other international students that opened my eyes to realities of other countries and new perspectives".

Ana Cristina King Martínez

AMSA Award 2022 and Fellows' Annual Meeting

In 2020, the year that marked AMSA's Tenth Anniversary of AMSA, the "AMSA Award" was established as a way to recognize members of the health sector who, with their initiatives and leadership, improve the quality of health services in Mexico. The prize consists of a 25,000 USD donation and a sculpture by a Mexican renowned artist. In 2020, the first edition of the AMSA Award, was given to Dr. David Kershenobich, General Director of the National Institute of Medical Sciences and Nutrition Salvador Zubirán, for his dedication and outstanding leadership during his career in the Mexican health sector and especially during the COVID-19 pandemic. Dr. Kershenobich assigned such donation to the development of a telemedicine project at the Institute.

On September 27th, 2022, the ceremony to announce AMSA's Award Second Edition was held during the annual Fellows' Meeting in Mexico City. This award was given to the Carlos Slim Foundation, for its great vision and commitment to Mexico in the construction of the Temporary Unit for COVID-19 treatment in Mexico City and for its collaboration with the AstraZeneca pharmaceutical for the manufacture of the COVID-19 vaccine that benefited more than 150 million people in Latin America.

During the AMSA Award ceremony, two important leaders of the Mexican health sector were publicly recognized for their outstanding work during the COVID-19 pandemic; it was thanks to the information they shared on their social media and other sources that the Mexican population was well informed and surrounded by trustworthy data.

These leaders are Guillermo Torre Amione, MD, Rector of TecSalud and Vice President of Research at the Tecnológico de Monterrey, and Francisco Moreno Sánchez, MD, recognized Mexican specialist in microbiology and infectology and Director of the Internal Medicine Division at ABC Medical Center Observatorio campus.

Award and Fellows' Annual Meeting

Gerardo Legorreta, Becky Aguilar-Álvarez, Pablo Legorreta, Carlos Slim, Guillermo Torre, Francisco Moreno and Wolfgang Aulitzky.

Everything
that AMSA does
is to promote,
motivate and train
Young Mexican
physicians.

The Annual AMSA Fellows' Meeting was celebrated as part of this important event. We invite all the Mexican Fellows who have participated in an OMI seminar in Salzburg, Austria since 2010. The purpose of these meetings is to keep communication with them, give them the opportunity to get to know each other and exchange experiences (networking), therefore strengthening the creation of alliances and professional relationships.

On this occasion, Inés Álvarez de Iturbe, MD, and Alexandro Martagón, MD, both AMSA fellows, took the podium during the ceremony to share a brief testimony of their trajectory in AMSA with the rest of the guests.

“My name is Inés, pediatrician, graduated from UNAM. I continued my medical training at Mexico’s Children’s Hospital Federico Gómez and I currently work at ABC Medical Center.

I have been part of the AMSA family for five years, and I can say that AMSA has allowed me to learn medicine in a way that has made me a better physician but also a better mentor, as to what we transmit to the residents and the students in the hospital.

Attending the OMI and the OMI-MEX seminars, has given me the opportunity to create a valuable network of professional contacts that has helped me to provide better health-care to my patients. I am very proud to belong to this family.”

Ines Alvarez de Iturbe, MD
ABC Medical Center

“My name is Alexandro, I graduated from the Tecnológico de Monterrey. I currently work in the Metabolic Diseases Research Unit at the National Institute of Medical Sciences and Nutrition Salvador Zubirán and at the Tecnológico de Monterrey School of Medicine. I have been part of the AMSA family since 2019. I have had the opportunity to attend an OMI Seminar in Salzburg, Austria and to take the online OMI-MEX Leadership Seminar. Most recently, I was selected for the Safety, Quality, Informatics, and Leadership post graduate program from the Medical School of Harvard University.

I thank the Harvard Foundation in Mexico, the Tecnológico de Monterrey, and of course, AMSA for providing so much support to Mexicans physicians, like me, to continue their medical training”.

Alexandro Martagon Rosado
TEC School of Medicine

Gerardo Legorreta, Pablo Legorreta and Carlos Slim Domit.

Carlos Slim Domit

“It is an honor to receive this recognition. The Temporary Unit for COVID-19 treatment that we sponsored, in collaboration with CIE and Mexico’s City State Government, was created in only 2 weeks. The Citi Banamex Convention Center was transformed into a hospital in only 2 weeks to provide medical care to COVID-19 patients. With this initiative, the capacity of Mexico’s City Ministry of Health to provide healthcare to COVID-19 patients was doubled. More than 9,000 patients received medical care in 413 days of operation. Important medical innovations were implemented, like the high-flow nasal prongs that prevented 70% of patients from needing a mechanical ventilator. An APP called “Claro 360” was developed to monitor both, the patients that were being taken care of at the center and those who went back home to fully recover. The indicators were very positive, it had a 3% fatality rate of hospitalized patients and zero deaths of the medical staff at the center. The number of active cases in the city went down faster than it would have had if this center had not existed. This had a very positive impact in the city’s economic recovery.

Rebeca Aguilar-Álvarez giving a welcoming speech.

We also collaborated with the AstraZeneca Foundation, mAbxience Argentina and Liomont in Mexico in the creation of the COVID-19 vaccine. One thing we must highlight after the pandemic is the extraordinary collaboration that we had between the different scientific and academic communities worldwide, from sharing information, everyone seeking for a way to all work together, not only developing new protocols, but also sharing the different stories from each country. Another very important highlight would be the bravery and commitment of all the medical staff around the world that risked their own life to save others. Another great lesson would be that when we face these kinds of challenges, we can only overcome them when we all collaborate together: governments, private companies, social organizations, scientific organizations, academies. We receive this award on behalf of all the organizations that have collaborated in these projects, on behalf of all the medical staff that worked in the temporary unit, on behalf of the companies that provided their support, on behalf of AstraZeneca and Liomont. Pablo and Gerardo, it is a great privilege to work with you and we are sure that we will continue to do many extraordinary projects together”.

Gerardo Legorreta and Guillermo Torre, MD.

Guillermo Torre Amione, MD

“I would like to share with you a little more about what we’ve done in the Tecnológico de Monterrey. During the pandemic, we had a hospital available for all the community of the state of Nuevo Leon, which treated more than 4,300 patients. One third of this population was on a mechanical ventilator and the survival rate was 90%, with only a 10% rate of mortality. When you compare this data with the international standards of the best hospitals in the world, we can proudly say that they are very similar; even if we didn’t have Remdesivir, the drug that has been shown to stop the COVID-19 virus from reproducing. On the other hand, the mechanical ventilators weren’t enough and somehow, we had to invent intensive care units in the emergency hallways of the hospital and work with very young Mexican doctors who were still in medical training.

Now that I’ve said this, the question I ask myself is: why did we have such a big difference in the medical care of COVID-19 patients in the private and public sector? Personally, I don’t think we need to talk about specific indicators from other institutions, but what I did notice is that we had patient care protocols very well established; we made sure to take care of the medical staff at all times, and to have all the equipment and medical supplies they needed to do their work.

Carlos Creel Carrera, member of AMSA's board.

Ana Lilia Ruelas, Gerardo Legorreta, Ana Cristina King and Alexandro Martagón.

For me, the fact that we achieved results at the same standard of other international institutions demonstrates something very important: that Mexico has the capacity to offer high quality medical care if there are protocols and well-established patient care processes.

Another fact is that we do have some structural problems to be improved in the Mexican health sector, we are lacking guidelines, joint efforts and coordination between all sectors. It is necessary that we consolidate a collective effort to improve Mexico's healthcare system. I truly congratulate AMSA for what it does, because I do consider it important and also necessary to join efforts in order to have a greater impact in the Mexican health sector.

The Tecnológico de Monterrey is proud to reaffirm its commitment to improve healthcare services in Mexico with willingness to collaborate with you on future projects.

Thank you very much"

Francisco Moreno, MD.

Francisco Moreno, MD

It is an honor for me to be part of the AMSA Award second edition, I really appreciate this recognition, because it truly means a lot to me. I want to take this moment to tell you a story that, today, has given a meaning to all the work I did during the COVID-19 pandemic.

When I was younger, my grandfather would take us to have lunch with him every Saturday followed with some ice cream. Every Saturday he would tell us a different story, either anecdotes or even some invented stories, but we looked forward to listen to grandpa's story every week.

It was January 2nd, 1998, and I had arrived home after a trip and he was in bed just knowing that he was living his final moments. I sat next to him and he told me that now it was my turn to tell him a story. I just said: "Grandpa, I'm a doctor, I don't tell stories" And he replied: "There are bad people in this world who only destroy it, but there are also stories worth telling, stories that make a big difference in this world". He made me promise him that one day I would tell him story that had made a difference in this world. My grandfather passed away, and days, months and years passed. I perfectly remember the day I saw the news when China confirmed and alerted the world about this new COVID-19 virus that could quickly become a world pandemic.

Gerardo Legorreta and Francisco Moreno, MD.

I was really worried and filled with uncertainty, but I knew that it was extremely Important to share real and reliable information so the Mexican population could know how to take care of themselves and their family and to know the magnitude of this pandemic that the whole world was going through.

From my position as a doctor, I began to do more research, I began to write on social media and do interviews, but most importantly, I began to share this valuable information with the Mexican population. Now that I know and have witnessed the impact that social media has in the world, I know that I need to keep sharing important and interesting data through my platforms.

This award means two things to me: first, we cannot forget what the whole world went through, we must never forget that more than 700,000 Mexicans lost their lives to COVID-19. And the second fact represents a personal achievement for me, because now I have a good story to tell my grandfather, a story that is worth telling because it sure made a difference in this world. Grandpa, I finally did what I promised you,

Thank you very much"

Guillermo Delgado García, MD

Sigma Xi Award

Our fellow, Guillermo Delgado García, MD, became an AMSA

Fellow in 2018, when he attended the OMI Neurology Seminar in Salzburg, Austria.

In the following years, we had the honor to have him participating in the OMI-MEX Neurology seminars in Mexico City in 2020 and 2022.

Guillermo Delgado is an outstanding fellow, who throughout the years has always been very close to AMSA, with great commitment, disposition and proactivity. AMSA is always proud to share successful stories about its fellows, excellent physicians that have achieved goals and important awards and recognitions, not only in Mexico, but globally.

In 2021, Guillermo Delgado was selected by the American Academy of Neurology to receive the Bruce S. Schoenberg International Award in Neuroepidemiology.

His most recent achievements include the accreditation of the Canadian EEG exam, to become "Diplomate of the Canadian Society of Clinical Neurophysiologists" and his inclusion as a full-time member of Sigma Xi, The Scientific Research Honor Society. This highly prestigious society is present in every academic space where scientific research is carried out such as universities, educational centers, industrial research facilities and/or governmental laboratories. More than 200 Nobel Prize winners have been members of this important society.

Currently, Guillermo Delgado is completing a medical fellowship in clinical research in the Comprehensive Program of Epilepsy (CEP) at the University of Calgary, Canada.

He who has
health has hope,
and he who has hope,
has everything.

Thomas Carlyle

“5 Minutes for a Life” Campaign

Early diagnosis of childhood cancer

AMSA is a partner in the initiative for early diagnosis of childhood cancer “5 Minutes for a Life” with Mexican Institute of Social Security (IMSS Foundation).

A Cancer that is diagnosed in early stages is CURABLE.

Diseases such as lymphoblastic leukemias, Hodgkin Lymphoma, germ cell tumors, among others, have survival rates around 90%. An early diagnosis allows a patient to receive early treatment which increases the chances of survival and the quality of life. When a disease is diagnosed in an early stage, it reduces the intensity and the length of the treatment. Additionally, it also decreases the chances for complications, long-term effects, as well as direct and indirect costs.

Very often, the delay to get to the correct diagnosis can be attributed to the patient, the family and also, the healthcare system. Many studies have come to the conclusion to implement certain measures to improve this situation. The first thing is basic medical education, for general doctors and the families and the second is a timely reference to a specialist.

OMI GLOBAL network and impact

In 2022, we extended the OMI program in Mexico by inviting Latin American doctors to participate. In July, OMI announced the official launch of OMI Vietnam, with which we now have a continuous medical education global program with 3 training centers: Salzburg, Austria, Mexico City and Hanoi in Vietnam.

The Open Medical Institute has an extensive partnership network and collaborates with institutions and individuals across the globe. The OMI international partners are actively engaged in promoting the OMI programs to local healthcare professionals and providing administrative, financial, and logistical support. The OMI local coordinators, our partners in the fellows' home countries, offer valuable information and assistance to physicians who are interested in the OMI programs. Despite globalization, medical care is local. It is in our common interest to consistently build local capacity and significantly improve the quality of healthcare services worldwide

When young physicians participate in an OMI program, they return to their home countries equipped with state-of-the-art medical information, tips and tricks from the most experienced specialists, and a network of colleagues and mentors whom they may consult with for the rest of their careers. This makes them ideally qualified to take on leadership positions in their own countries while simultaneously improving care for their patients. Since 1993, more than 2,300 American and European physicians have donated their time to teach and mentor colleagues from around the world. With more than 24,500 alumni living in 128 countries, our impact is global.

Attendees of OMI's Annual Benefit enjoying the concert.

OMI Annual Benefit

The annual Music for Medicine Benefit took place on November 18th, 2022, in New York City. Hosted by the American Austrian Foundation, Thomas McGrath, Chairman of the AAF, and Daisy Soros, Benefit Chair of the AAF, provided a warm welcome for the guests and introduced the program for the evening. Following, Dr. Wolfgang Aulitzky, CEO of the Open Medical Institute, shared updates from Salzburg, Austria, including success stories of the OMI. He also spoke about the successful OMI expansion into Mexico as well as the plans to develop OMI seminars in Vietnam next year. A moving concert was given by members of the Vienna Philharmonic Orchestra, including Wolfgang Breinschmid (violin), Milan Setena (violin), Robert Bauerstatter (viola), and Edison Paschko (cello). Musical pieces included Ignaz Pleyel's Quartet No. 2 in F Moll for Flute, Violin, Viola, and Violoncello as well as Opus 41 Allegro Andante con Variazioni. W. A. Mozart's Divertimento in Es Dur for Violin, Viola, and Violoncello (KV 563 1. Satz: Allegro) and the Quartet in D Dur for Flute, Violin, Viola, and Violoncello (KV 285 Allegro Adagio Rondeau) were also eloquently performed.

Members of the Vienna Philharmonic Orchestra.

Rebeca Aguilar-Álvarez and Tanseli Atilgan, wife of Roger Hartl, MD Neurosurgeon at Weill Cornell.

Stephanie Faschang and Wolfgang Aulitzky.

Gerardo Legorreta and David Kershenovich, MD.

James Callahan, MD. Director of International Education at CHOP and his wife Irene.

The event comprised of a live paddle raise auction, a silent auction, as well as raffle items. There were 200 guests, including AAF board members, OMI faculty and friends, as well as committed individuals from business, law, medicine, and public service. The benefit was a resounding success, with all funds going towards the Salzburg, Austria Medical Seminars of the Open Medical Institute (OMI).

We would like to thank all guests for spending the evening with us, believing and investing in our mission to expand medical education beyond borders, and to the musicians of the Vienna Philharmonic for providing a beautiful musical concert!

Financial Statements

Report of the Independent Auditors

To the Assembly of Associates of
Alianza Médica para la Salud, A.C.
Mexico City

Opinion

We have audited the financial statements of Alianza Médica para la Salud, A.C., which includes the statement of financial position as of December 31, 2022 and 2021, the statement of activities and cash flows, corresponding to the year ended on those dates, as well as the explanatory notes to the financial statements that include a summary of the policies significant countable.

In our opinion, the accompanying financial statements reasonably present, in all material respects, the financial situation of the Alianza Médica para la Salud, A.C., as of December 31, 2022 and 2021, as well as the statements of activities and cash flows, corresponding to the years ended on those dates, in accordance with the Mexican Financial Information Standards.

Base of opinion

We have carried out our audit in accordance with International Standards on Auditing (NIA). Our responsibility in accordance with these standards is described later in the "Auditor's Responsibilities in relation to the Audit of Financial Statements" section of our report. We are independent from the Institution in accordance with the ethical requirements applicable to our audit of the financial statements in Mexico and have fulfilled the other ethical responsibilities in accordance with those requirements.

Responsibilities of Management and those in charge of the government of the entity in relation to the financial statements

The Administration of Alianza Médica para la Salud, A.C., is responsible for the preparation and fair presentation of the accompanying financial statements in accordance with NIF, and for the internal control that the Administration deems necessary to allow the preparation of financial statements free of material deviation, due to fraud or error.

In the preparation of the financial statements, Management is responsible for assessing the ability of the Entity to continue as "Entity in operation", revealing, as appropriate, the matters related to the "Entity in operation" and using the accounting principle of "Entity in operation", except if the Management intends to liquidate the Entity or cease operations, or there is no other alternative.

Homero No. 1425 Despacho 404 Col. Polanco V Sección C.P. 11560 Ciudad de México Tel +52 (55) 5271 7908

Responsibilities of the auditor in relation to the audit of the financial statements

Our objective is to obtain reasonable assurance that the financial statements as a whole are free from material misstatement, due to fraud or error, and issue an audit report that contains our opinion. Reasonable assurance is a high degree of security, but does not guarantee that an audit conducted in accordance with the ISA always detects a material misstatement when it exists. The inaccuracies may be due to fraud or error and are considered material if, individually or in an aggregate way, it can reasonably be expected to influence the economic decisions that users make based on the financial statements.

As part of an audit in accordance with International Standards on Auditing, we apply our professional judgment and maintain an attitude of professional skepticism throughout the entire audit. As well:

We identify and evaluate the risks of material deviation in the financial statements due to fraud or error, design and apply audit procedures to respond to such risks and obtain sufficient and adequate audit evidence to provide a basis for our opinion. The risk of not detecting a material deviation due to fraud is higher than in the case of a material deviation due to error, since fraud can involve collusion, forgery, deliberate omissions, intentionally erroneous statements or circumvention of internal control.

We obtained knowledge of the internal control relevant to the audit in order to design audit procedures that are appropriate in accordance with the circumstances and not with the purpose of expressing an opinion on the effectiveness of the internal control of the Entity.

We evaluate the adequacy of the accounting policies applied, the reasonableness of the accounting estimates and the corresponding information revealed by the Management.

We conclude on the adequacy of the use, by the Management, of the accounting post of "Entity in operation" and, based on the obtained audit evidence, we conclude that there is not material uncertainty related to facts or conditions that can generate significant doubts about the Entity's ability to continue as "Entity in operation".

We evaluate the comprehensive presentation, structure and content of the financial statements, including the information disclosed.

We communicate with the Entity's Management regarding the scope and timing of the planned audit and the significant findings of the audit, including any significant deficiencies in internal control that we identified in the course of our audit.
